PROJECTS

AI Resume Analyzer

GitHub | Live

React, TypeScript, React Router v7, Puter.js, AI/LLM Integration

- Built an **AI-powered resume analyzer** that evaluates resumes against specific job descriptions and generates **ATS scores, skill gaps, and targeted improvement suggestions**.
- Implemented an automated resume analysis workflow using **LLM-based evaluation**, extracting relevant skills, experience, and keywords to compare candidate profiles against job requirements.
- Developed **resume upload, cloud storage, and browser authentication** workflows with Puter.js, while managing application state through Zustand.
- Built a responsive and reusable interface using **React, React Router v7, and Tailwind CSS**, with modular components for resume analysis results and user workflows.

AI Book Library

GitHub | Live

Next.js, TypeScript, MongoDB, Mongoose, Vercel Blob, Vapi AI, ElevenLabs

- Built **WhisperDocs**, a voice-first AI platform for real-time PDF conversations using **Vapi** and **ElevenLabs**.
- Engineered a client-side **PDF ingestion pipeline** with **pdf.js** for text extraction, thumbnails, and overlapping page-indexed chunks.
- Implemented **document upload, cloud storage, and authentication** using **Clerk, Vercel Blob, and MongoDB**.
- Added **dual-layer Zod validation** and transactional rollback across **MongoDB and blob storage**.
- Built a responsive, reusable UI with **Next.js App Router, React 19, and Tailwind CSS**.
- Implemented **document-grounded voice Q&A** by indexing PDF chunks in **MongoDB** and exposing them as a callable voice-assistant tool.

ChatApp

GitHub | Live

React, Node.js, Socket.io, WebSockets, JWT, REST APIs, Zustand

- Designed and deployed a **real-time messaging platform** supporting concurrent users through Socket.io with low-latency bidirectional communication, real-time client synchronization, and **scalable state management using Zustand**.
- Implemented **JWT-based authentication and authorization** with protected routes and REST APIs, alongside structured **server-side and client-side error handling**, optimized API integration, and **production deployment**.
- Optimized authenticated REST API performance by eliminating a redundant MongoDB lookup in JWT authentication, reducing average latency by **50%** and doubling throughput from **64.5 to 129.4 req/s** at 100 concurrent connections.

EXPERIENCE

Open Source Contributor

Aug. 2026 – Present

Appwrite | Software | Open Source

Remote

- Implemented **Hugging Face OAuth provider support** within Appwrite's authentication system, extending OAuth integrations and bringing the feature to **production**.
- Contributed across both the **Appwrite Backend and Console repositories**, implementing authentication flows, API integration, and corresponding Console UI changes.
- Collaborated with Appwrite maintainers through **technical discussions, API investigation, debugging, and code reviews**, delivering the implementation upstream.
- Hugging Face OAuth is now **live on the Appwrite website**.

Learning Unlimited | E-Learning / Edtech | Open Source

Remote

- Resolved a **critical data corruption issue** by enforcing architectural invariants in the Django administration panel, preventing system-wide crashes during recovery of deleted QuasiStaticData components. PR #4438.
- Automated administrative workflows by capturing **active user session hooks** to populate metadata fields, eliminating manual tracking workflows. PR #4430.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL

Frontend: React.js, Next.js, React Router, Tailwind CSS

Backend: Node.js, REST APIs, API Development

AI / GenAI: LLMs, RAG, Prompt Engineering, AI Agents, Vapi AI, ElevenLabs

Databases & Tools: MongoDB, Mongoose, Git, GitHub, Docker, Vercel, Vercel Blob, Linux/WSL
